“Digital Roll Stabilizer System”

Keypower digital roll fin stabilizers system sets itself apart from other systems starting with our innovative fin design. Constructed from Poly Urethane, our fins have a near neutral buoyancy in the water, requires no fin maintenance and its rugged design makes them highly impact resistant. We offer an array of fin sizes starting from 4sq/ft, going up to 24 sq/ft. System comes with digital electronic control stations, and can have any custom hydraulic package designed to go with it. Further benefits of the Keypower Digital Roll.

- * Microprocessor controlled fin stabilizer system.
- * Gyro stabilized roll control.
- * Closed loop feedback with feed-forward control.
- * Interfaces to ships GPS for automatic tuning of sensitivity.
- * Multiple control station options available.
- * Automated system bleed and plane zeroing functions for easy set-up.
- * Sensor inputs for measuring low hydraulic oil or hydraulic system over temp conditions.
- * Input of Toe-in value for setting offsets in plane zeros.
- * Capable of setting up tuning parameters for different size ships and hydroplane combinations.
- * Touch-screen display panel for easy system monitoring.
- * Fully automatic or manual modes of operations.
- * Low speed shut off of system (GPS must be installed).
- * High speed shut down of system to protect hydroplane (GPS must be installed).
